PROJECT WORK (INTERNSHIP)

e-HealthCard (Electronic Health-Card)
(Bootstrap, Javascript, PHP, SQL)

- The aim of the thesis is to propose a PDA based **e-Health card** system using **smart card** for patient identification which would improve overall health care system.

- This entire system have these facilities to store a patients-past history, payments with regards to hospitals, doctors and patients as well as medicines and medical insurance.

PROJECT WORK (COLLEGE)

1. EduRig - A Online Portal System to Simplify Exams
(JSP-Java Server Page, Javascript, Phpmyadmin-Database, Bootstrap)

- A technology driven way to simplify **examination** and **assignment-activities** through one platform. Students as well as teachers can view each candidates overall perfomance.

2. MediPill Tracker - A featured Medical Application
(Android Studio using JAVA and XML, SQLite-Database)

- This is an Cross-Platform based application in which an **automatic alarm-system** is implemented. Patients need not remember their medicine-dosage timings as they can set an alarm on their dosage timings.

- The alarm can be set for multiple medicines and timings including **date, time and medicine-description**. A notification will be sent to them through **email or message** inside the system preferably chosen by the patients.

3. D-bazzar Mobile Application
(Android Studio using JAVA and XML, Firebase-Database)

- Mobile Application for Diamond business to simplify and managing history of **sell, buy** and also maintain the **daily expense** of that person.

- It provides easy transection between **seller, buyer and broker**.
